## Skills

- JavaScript | TypeScript | Python(familiar) | Java | C | PostgreSQL | Node | Nestjs | React | Redux | Terraform | MongoDB | Git
- AWS | Cloud Computing | CI/CD | Jest | Cucumber | Docker | Kafka | Unit Testing | Serverless | OOP | Figma
- Microservices | Distributed Systems | Frontend | Backend | Full-Stack | English, Hindi – All professional proficiency or above

## Experience

### Fullstack Developer Associate

#### Prominence Games

Remote 03/2023 - Present

- Led the implementation of a robust DevOps pipeline, integrating automated testing, continuous integration, and deployment strategies, thereby accelerating the software development lifecycle.
- Led the implementation of Infrastructure as Code (IaC) using **Terraform**, streamlining the deployment process and ensuring consistent environments across development, staging, and production which **reduced** the time it took to manually set up infrastructure using aws console for an environment **by 80%** and **improved scalability** of the system by using **Auto Scaling Groups (ASG)** and **ALB**.
- Integrated wallet signing to generate access tokens and refresh token pairs, enhancing the security of the authentication process.
- Designed and implemented an innovative solution for dynamically generating NFTs by layering various assets to display a placeholder image to end users and asynchronously generating the final NFT, resulting in an **80% reduction in generation pipeline costs and time**.
- Proposed and evaluated potential solutions to reconcile dropped transactions including: Cron job polling to periodically update metadata and user data based on the latest blockchain transactions.

### Software Engineer Intern

#### Prominence Games

Remote 03/2022 - 08/2023

- Enhanced security and optimized Axios integration by implementing a robust solution to store authentication tokens (JWT) securely in an HTTP-only signed cookie
- Successfully integrated Storybook into the frontend design system, enabling isolated component testing across various states with a test coverage of 30%.
- Effectively restructured 15% of the database schema to seamlessly accommodate new frontend changes and ensure data consistency.
- Successfully integrated the Ronin (EVM blockchain) API into the Content Management System, streamlining the purchase order flow for improved efficiency and functionality.
- Enhanced the user experience (UX) by refining five UI components through subtle design enhancements and user feedback.
- Leveraged knowledge in Git, Javascript, Typescript, React, Nest, Umi, Network Security and REST architecture.**

### Software Engineer Intern

#### IkanBilis

Remote 08/2021 - 10/2017

- Developed a server-side app and integrated Discord-Js library for Ikan Bilis Community, **boosting engagement by 40%** with moderation, invite stats, XP tracking, and leaderboards.
- Incorporated persistent storage with caching for efficient management of recently used items.
- Executed AB testing, funneled data via a customer data platform (Segment) to Facebook Pixel and Google Analytics, achieving a 65% coverage rate.
- Created a Proof-of-Concept for application load testing using Locust and delivered comprehensive analytics.
- Leveraged Knowledge in Git, Python, Javascript, React, Express, Redis, MongoDB and CronTab.**

## Education

### Bachelor of Technology

#### Rajasthan Technical University

Jaipur, RJ, India 08/2019 - 05/2023

- Major in Computer Science Engineering

## Projects

### KRAKEN (HTTP Server):

- Developed a C-based HTTP web server from the ground up. [Github](#), [Documentation Site](#) (03/2023)
- Crafted the project entirely in C, alongside a dedicated data structure library, Owl ([Github](#)), tailored to its requirements.
- Designed a custom data structure library to encompass essential structures like **Hashmap**, **LinkedList**, **Queue**, and **Threadpool**.
- Implemented and utilized a thread pool to enhance service throughput, enabling concurrent handling of multiple blocking requests.
- The project also features a documentation site, featuring tutorials and API specifications.

### SORTVIZ (Sorting Visualizer)

- Created a Sorting Visualizer in **React**. Link to [Github](#), [Demo](#) (08/2021)
- The visualizer features 5 **sorting algorithms**: Bubble, Selection, Quick, Heap and Insertion.
- The project includes a built-in drawer for displaying additional algorithm information and supports hotkeys.
